

Lowers to within 1" from the Ground Eliminating the Need for an Extra Ramp.

We recommend that this hauler be used by vehicles with a class IV or V hitch. The heavier the hitch the better. The receiver size needs to be 2" square or else you need a receiver reducer. Please consult with your vehicle or hitch manufacturer for complete requirements and specifications for your specific hitch.

MIGHTY HAULER

1000M

❖ WHO EVER SAID YOU CAN'T TAKE IT WITH YOU? ❖

Designed by our engineering team with auto cad and manufactured in the USA in our plasma CNC facility. No details have been over looked. The **Mighty Hauler 1000M** use's a one of a kind "Sway Lock" technology to ensure the motorcycle does not sway during travel. The "Sway Lock" makes the use of strapping the lift to the vehicle unnecessary. The "Sway Lock" pin is $\frac{3}{4}$ " and also works as a safety pin taking pressure off of the jack. The **Mighty Hauler 1000M** is CNC quality. We have four years of experience in manufacturing motorcycle lifts and have yet to have a problem.

**Works Great
With
Campers or
Trucks!!!**

When you choose the **Might Hauler 1000M** there is no attachments or options that cost more money. Everything is included. The **Might Hauler 1000M** has been engineered to lower within 1" from the ground allowing us to build the loading ramp right on the storage platform. This means there are No Extra Parts needing to be stored or carried. You also do not have to deal with trying to drive an 800 lb. motorcycle up a steep incline. The platform is 8" across and 81" long which makes is large enough for the widest tires and longest bikes. The **Mighty Hauler 1000M** also comes standard with a 2" hitch receiver to pull a small trailer or flat tow a car. Break lights and turn signal lights are included but not installed.

**Reinforced
Integrated
Hooks for
Extra Strength
and Support.**
